

TCEQ ANNUAL INSPECTION & EVALUATION

The TCEQ requires all public water systems to have each of the system's ground, elevated, and pressure tanks inspected annually.

- While this work can be performed by water system personnel, most systems do not have personnel that are trained to determine whether the interior and exterior coating systems are continuing to provide adequate protection to all metal surfaces. With today's emphasis on infrastructure preservation, the need for evaluating water storage tanks has become increasingly important and the structural integrity of each tank, and its ability to provide water security to your community, is of prime importance. This is especially true with the new risk assessment provisions of the Safe Drinking Water Act amendments enacted in October 2018.
- Additionally, inspecting these tanks often requires climbing the tanks, which many water system personnel are not trained or equipped to safely perform.

TANK INDUSTRY CONSULTANTS PERSONNEL ARE TRAINED AND EQUIPPED TO PERFORM THESE INSPECTIONS FOR YOU. WATER TANKS ARE OUR SPECIALTY. WE ARE A NATIONWIDE TANK ENGINEERING FIRM AND WE HAVE SUCCESSFULLY COMPLETED OVER 17,000 WATER TANK PROJECTS SINCE 1979!

We are water tank experts. Our Managing Principal, and others at Tank Industry Consultants chair and participate in water tank Standards-writing committees for the American Water Works Association (AWWA) and others. We share our intimate knowledge of all facets of water storage in these committees and it results in Standards that are up-to-date, understandable, and useable. For your protection and benefit, we also know what has not been included in these Standards and how inclusion of features in excess of the AWWA minimum requirements for your project can prolong the life of your tank(s).

To help you meet these TCEQ requirements, preserve and protect your valuable water storage assets and to help you prepare and plan for future capital repair and/or replacement costs, we invite you to consider using Tank Industry Consultants for your annual inspections and the AWIA risk assessments for your tanks. Let us be your first line of defense against corrosion and deterioration of your water storage tank(s).
